drootoo

Solution Brief

Unified Cloud Platform

Benefits

- 40% Cost Reductions
- 30% Extra Efficiency
- Better Governance
- Increased Security
- Improved Productivity
- User Friendly Interface
- Usage Visibility

Top Features

- Unified Platform
- Distributed Cloud Operations
- Analytics and Reporting
- Network Manager
- Leading clouds (IAAS)
- Location Based Data Storage
- Role Based Access Control
- Template based operations
- Infrastructure Versioning
- Cloud Connect

With multiple clouds used for high availability and disaster recovery, a Unified Cloud Platform is needed to ensure compliance to data storage laws and industry standards, in a seamless, inbuilt manner without administrative overhead.

Security logging, Live Auditing as well as Reporting ensure pin point tracking of cloud usage to ensure adherence to policies enforced by business, government policies or industry regulations.

R&D US:- 162, South Park Street, CA, US 94107

Challenges you may be facing:

Cost Management
With usage billed by time and/or amount of data, costs are dynamic. Tracking resource usage is a challenge.

Governance Issues
Role based access and provisioning of resources, across multiple clouds, needs administrative heavy lifting.

Security and Auditing
Locking down user permissions and tracking resource access requires multiple levels of logging.

Un-Tested Partners
Finding trusted partners with capabilities, experience and stability in a dynamic market takes time and effort.

Vendor Lock-in
Using a single cloud is a recipe for uptime and/or billing issues in the future.

Developers Required
Even simple activities on many clouds require scripting or programming for replication or automation. Knowledge of cloud systems is hard to find.

Losing Control
Moving from in-house IT to cloud services leads to loss of control over availability and operation of IT infra.

Solutions

Compare and select
All available clouds are listed for resources, to enable selection by feature info.

Unified Cloud Platform
Selection and provisioning of resources in multiple distributed clouds seamlessly avoids dependency and increases business agility.

Roles with Permissions
Users are assigned to Roles with permissions to perform only approved actions, to ensure governance.

Live Audit
Key pairs are used to authenticate and log user access, with live audit reporting being available.

Compliance
Government Laws regarding data storage including location and period can be adhered to only when zone level resourcing is ensured.

Trusted & Validated
In 3 years, more than 300 customers have validated our solution to fit their cloud aspirations.

Automated, by design
Enter the number of copies and reuse system images. No coding needed for common tasks on our smart cloud.

Divide and Conquer
Spreading cloud infra across distributed clouds ensures availability and operation of IT infra when needed.
